

Essential Medicines List

Primary and Secondary Healthcare Facilities

Department of Health
Government of South

Foreword

Health is a fundamental human right and provision of essential medicines is one of the essential components of primary health care. A standardized Essential Medicines List can meet end users' requirements and help rationalize the purchasing and distribution of medicines, thereby reducing costs to the health system.

The World Health Organization (WHO) defines Essential Medicines as *"those that satisfy the priority health care needs of the population"*. They are intended to be available within the context of functioning health systems at all times in adequate amounts, in the appropriate dosage forms, with assured quality, and at a price the individual and the community can afford.

Developing and updating Essential Medicines Lists (EMLs) was the responsibility of the Federal Ministry of Health, before 2011, and provinces were maintaining medicines procurement lists based on their field requirements. However, after the 18th Constitutional Amendment in June, 2011, where all administrative and financial powers were devolved to the provinces, it was acknowledged by the Department of Health, Government of Sindh, that there should be segregated list of essential medicines for each facility level.

The Department of Health, Government of Sindh, formally approached USAID | DELIVER PROJECT in 2012, for technical support to develop EMLs for the primary and secondary level health facilities of the province. The Project quickly mobilized its resources to respond to this request and, in detailed consultation with all stakeholders, including health and medical professionals from the WHO/Pakistan office as well as districts, developed customized EMLs. The Department of Health, Government of Sindh, is pleased to announce the first ever province-specific EMLs for primary and secondary level health facilities that meet WHO standards and having the endorsement of WHO Pakistan. The EMLs have been distributed among all stakeholders up to districts level for implementation.

The Department of Health will convene a provincial level committee with representation from health and medical professionals, with the aim to regularly review and update the EMLs based on end users' requirements.

I would like to express my gratitude to USAID/Pakistan for providing financial support to the USAID | DELIVER PROJECT for development of this province-specific standard EMLs for Sindh. I am also grateful to the WHO/Pakistan for extending technical support to the finalization of the EMLs. The support will contribute to ensuring transparency and value for money in procurement, enhancing performance of health professionals, and ensuring availability of quality medicines for the people of Sindh.

Secretary,

Department of Health
Government of Sindh

*Secretary to Govt. of Sindh
Health Department,*

Acknowledgement

The Essential Medicines Lists (EMLs) have been developed for primary and secondary level healthcare facilities of the Department of Health (DOH), Government of Sindh, with the technical and financial support of United State Agency for International Development (USAID)-funded USAID | DELIVER PROJECT, and with the technical guidance of the World Health Organization (WHO) Pakistan office. Moreover, the health and medical professionals from district health offices and public sector health institutions of Sindh have also contributed and provided valuable inputs in finalizing the EMLs.

I would like to express my deepest appreciation to all relevant public sector stakeholders, development partners, health specialists and medical professionals from WHO/Pakistan for reviewing, contributing, guiding and supporting the development of the EMLs for primary and secondary healthcare facilities of Sindh.

The DOH highly appreciates the auspicious and productive support of USAID/Pakistan towards strengthening the health sector of the Sindh province. I would like to thank Mr. Jonathan Ross, Director Health and Mr. Khalid Mahmood, Project Management Assistant, Health Office of USAID/Pakistan for their leadership and coordinated support enabling the USAID | DELIVER PROJECT to successfully produce the EMLs.

We also wish to appreciate Dr. Muhammad Tariq, Country Director, USAID | DELIVER PROJECT Pakistan for his leadership role and his dedicated team for their devoted efforts and support provided in developing the EMLs.

Health Services Sindh Hyderabad

Background: Essential Medicines

Medicines have a major role in protecting, maintaining, and restoring health. Policymakers and departments implementing health activities and programs are responsible for providing appropriate quality medicines, in adequate quantities, at reasonable prices.

During many decades, access to essential medicines has improved. However, in developing countries, problems remain in ensuring equitable access to quality medicines and promoting rational use; despite the effort of governments, development agencies, and WHO. Reforms in health sector financing, globalization, and economic recessions have impacted access to essential medicines.

The publication, *WHO Model List of Essential Medicines*¹, is a guide for developing national and institutional essential medicines lists. This model list is regularly revised.

Essential medicines are—

- intended to satisfy the priority healthcare needs of the population
- selected with regard to disease prevalence, evidence on efficacy and safety, and comparative cost effectiveness
- intended to be available within the context of functioning health systems, at all times; in adequate amounts, in the appropriate dosage forms, with assured quality, and at a price the individual and the community can afford
- one of the most cost-effective elements in modern healthcare; their potential health impact is enormous.

The concept of essential medicines means looking to the future. The WHO list is regularly updated with the selection of medicines that reflect new therapeutic options and changing therapeutic needs; ensures drug quality; and provides for the continued development of better medicines, medicines for emerging diseases, and medicines to meet changing resistance patterns.

Pakistan National Essential Medicines List

To help address the disease burden in Pakistan, as noted above, the National Essential Medicines (Drugs) List (NEML) of Pakistan was first prepared in 1994, in consultation with experts in the field. The list was reviewed in 1995, 2000, and 2003. The current national list (2007) is the fourth revision; it includes 335 medicines of different pharmacological classes.

The former Federal Ministry of Health (MOH) previously published and disseminated this list to healthcare professionals as part of an effort to increase the acceptability of the concept as envisaged in the National Drug Policy. The former MOH expected the provincial health departments and the local health authorities to procure the drugs on the list. Although the list was not exactly followed in practice, the concept is a cost-effective mechanism for public procurement of drugs; EML's use should be encouraged.

The WHO discourages using nomenclature of EDL (Essential Drugs Lists) because the word 'Drugs' is also commonly used for narcotics and other stimulant drugs. Therefore, WHO recommends the nomenclature 'EMLs' (Essential Medicines Lists).

¹World Health Organization (WHO). 2011. *WHO Model List of Essential Medicines*. Geneva: WHO.

What is an Essential Medicine?

Since 2002, essential medicines have been defined as *"those that satisfy the priority health-care needs of the population. They are selected with due regard to public health relevance, evidence on efficacy and safety, and comparative cost-effectiveness. Essential medicines are intended to be available within the context of functioning health systems at all times in adequate amounts, in the appropriate dosage forms, with assured quality and adequate information, and at a price the individual and the community can afford. The implementation of the concept of essential medicines is intended to be flexible and adaptable to many different situations; exactly which medicines are regarded as essential remains a national responsibility."*(1) This definition evolved from the first definition in 1977, which was adopted in the Alma-Ata Declaration of 1978 (2). The **main** change has been in the selection process—from an expert-based approach to an evidence-based approach.

An EML includes a limited number of carefully selected medicines. These lists have been published as formularies and institutional lists of medicines, which are made available to health facilities and health workers. The list may not always be called an EML; but, whatever the name, they serve the same function. EMLs have been one cornerstone of public health delivery and the basis for efforts to ensure consistent medicine supply and management. It is an important strategy for improving access to and use of medicines, especially for the vulnerable segment of a population. Furthermore, an EML can be an advocacy tool to help countries spend their limited resources on the medicines that are most needed and that offer the best value for the money.

WHO recommends the following process to develop a national EML.

Pakistan Double Burden of Disease²

The burden of disease (BoD) in Pakistan is dominated by communicable diseases, reproductive health problems, and malnutrition; which account for about 50 percent of the total. This includes a high maternal mortality ratio (276/100,000 live births); low antenatal care coverage (61 percent); frequent complications of pregnancy and child birth; low family planning coverage (30 percent); and a high for children under-5 years, infant, and neonatal mortality (94, 78, and 54/1000 live births, respectively). Malnutrition in the young is an underlying cause of more than 50 percent of the deaths—one-fifth of newborns have low birth weight and 38 percent of children under-5 years are underweight. These health issues are aggravated by a low exclusive breastfeeding rate for infants under-6 months (37 percent of children) and low vaccination coverage (47 percent). Added to this burden are non-communicable disease (NCD [cardiovascular diseases, diabetes, cancers, injuries, and neuro-psychiatric disorders]). This double burden of disease is a major challenge in the health sector of Pakistan. Respiratory infections and diarrheal diseases are still the major killer diseases in Pakistan, particularly for children under-5. Pakistan is the second country (after India) in Southeast Asia that is moving toward a concentrated HIV and AIDS epidemic stage for groups like injecting drug users (IDUs) and male sex workers (MSWs). The proportional mortality rates for Pakistan for 2008 estimates are represented in the following figure.

Proportional Mortality³

(percentage of total deaths, all ages)

Activities and Process adopted to develop EMLs

Extensive research on the Internet to collect data and other available information was done. This included WHO, United Nations Children's Fund (UNICEF), Centers for Disease Control and Prevention (US-CDC), Department of Health (DOH) Sindh, Sindh Health Sector Reform Unit (HSRU), and many other websites. Consultative meetings were held with the WHO Pakistan team, and the provincial and district health officials, to find information on available EMLs and procurement lists. All the material/information collected was reviewed and a situation analysis was completed; it identified the gaps and challenges.

After completing these steps, recommended procurement lists for essential drugs/medicines for each primary- and secondary-level healthcare facility for the Department of Health Sindh was developed. These lists are based on the *WHO Model List of Essential Medicines*, WHO treatment guidelines and feedback, and observations from field visits to health facilities. The draft lists were shared with the WHO Pakistan and after several extensive consultations a final draft was endorsed by WHO which then was shared with the provincial and district health officials of Sindh in a consultative workshop for feedback. The recommendations from the consultative workshop were incorporated and the lists were finally approved by Sindh Health Department for implementation throughout the province.

Using the Essential Medicines Lists

Use the EML below as the basis for standardized procurement. The EML uses the international non-proprietary names (INN) classification. INN is the official shortened scientific name or generic name, based on the active ingredient used. Using the INN reduces the risk of duplication, confusion or errors in identifying a product. For example, cotrimoxazole (the official or generic name) is easier to recognize and remember than the range of alternatives, such as Septran, Bactrim etc. and avoids mistakes in prescribing, dispensing and ordering. Generic drugs/medicines are also usually much cheaper than proprietary drugs. Rule 13 of SPPR 2010 also prohibits the use of proprietary or brand names.

Essential Medicines Lists help to simplify quantification of drug requirements and the training of those responsible for prescribing and dispensing drugs. If only a limited number of drugs are used, health workers will be more familiar with indications, dosages, side effects and contraindications.

EXPLANATORY NOTES

The segregated core lists presents the list of minimum medicine needs for a basic health-care system, listing the most efficacious, safe and cost-effective medicines for priority conditions. Priority conditions are selected on the basis of current and estimated future public health relevance, and potential for safe and cost-effective treatment.

☐	<i>The square box ☐ symbol is primarily intended to indicate similar clinical performance within a pharmacological class. The listed medicines are the example of the class for which there is the best evidence for effectiveness and safety. In some cases, this may be the first medicine that is licensed for marketing; in other instances, subsequently licensed compounds may be safer or more effective. Where there is no difference in terms of efficacy and safety data, the listed medicine is the one that is generally available at the lowest price, based on international drug price information sources. Not all square boxes are applicable to medicine selection for children. Therapeutic equivalence is only indicated on the basis of reviews of efficacy and safety and when consistent with WHO clinical guidelines.</i>
+	<i>The + symbol indicates that there is an age or weight restriction on use of the medicine; details for each medicine can be found in Table 1.</i>
©	<i>The © symbol signifies that there is a specific indication for restricting its use to children.</i>

The presence of an entry on the Essential Medicines List carries no assurance as to pharmaceutical quality. It is the responsibility of the relevant procurement authority to ensure that each product is of appropriate pharmaceutical quality (including stability) and that when relevant, different products are interchangeable.

Medicines and dosage forms are listed in alphabetical order within each section and there is no implication of preference for one form over another. Standard treatment guidelines should be consulted for information on appropriate dosage forms.

Table 1: Medicines with age or weight restrictions

atazanavir	>25 kg
atropine	>3 months
benzyl benzoate	>2 years
betamethasone topical preparations	Hydrocortisone preferred in neonates
cefazolin	>1 month
ceftriaxone	>41 weeks corrected gestational age
chlorphenamine	>1 year
diloxanide	>25 kg
doxycycline	>8 years (except for serious infections e.g. cholera)
efavirenz	>3 years or >10 kg
emtricitabine	>3 months
fluoxetine	>8 years
ibuprofen	>3 months (except IV form for patent ductus arteriosus)
mefloquine	>5 kg or >3 months
metoclopramide	Not in neonates
ondansetron	>1 month
saquinavir	>25 kg
silver sulfadiazine	>2 months
tetracaine	Not in preterm neonates
trimethoprim	>6 months
xylometazoline	>3 months
